

Ali Jaffri

Director

Ali Jaffri is the Director of Web Technology and Development at DCI, where he leads the integration of Advanced Web Frameworks, Artificial Intelligence (AI), Cloud Computing and Infrastructure into the company's web strategies. With over twenty years of experience in the IT sector, Ali has developed a comprehensive skill set that includes backend web development, server architecture, security, and the implementation of open-source content management systems.

Under his leadership, DCI has seen remarkable progress in web development, DevOps, web infrastructure, and the security of digital assets. Ali Jaffri's role is essential in ensuring these crucial technological domains' seamless operation and robust protection. His innovative approach to configuration management and cloud automation has revolutionized the company's management of client websites, achieving unparalleled stability, security, and cost efficiency.

Ali Jaffri began his career focusing on computer hardware, networking, and pen testing before he embarked on the journey specializing in Web Development, particularly emphasizing web security, visibility (SEO), threat detection, Web Application Firewalls (WAF), and mitigation strategies. Before joining DCI, he contributed significantly to the large-scale eCommerce and communications industries in Europe and North America, where he honed his skills in various frameworks, and the migration of legacy websites to secure server environments.
